Premium Quality Business Broadband

iNet
INTELLIGENT NETWORKS

Enhanced Pro Broadband
Up to 16 Mbps download, Up to 2.5Mbps Upload

2+

Overview

Enhanced Pro is ideal when you need broadband that is business strength, robust and high speed, and the ability to send out large amounts of e-mails or other data.

Features

Our package is ideal for daily professional use. Pro business grade broadband includes some impressive features.

It provides an unlimited transfer allowance (subject to fair use policy), free e-mail with anti-spam and anti-virus controls. Other features include 100Mb of webspace, and 100Mb of mail storage, static IP address and free set-up if switching provider using a MAC.

Support

First class support is all part of the service. Our broadband packages include dedicated online technical support from Digitel, should the unexpected arise.

Technology

ADSL 2+ is the product of improved technology. It provides a more consistent platform for broadband and for most, an increase in download speed by doubling the frequency band used.

Enhanced Pro improves on this even further, using the latest Annex M enhancements to deliver a maximum upstream rate of 2.5 Mbps.

These improved data rates depend on the exchange technology being suitable for speed boosts and the line being Annex M compatible. We recommend the Thomson TG585 Wi-Fi router.

Optional Hosted/Managed Services

Hosted Services are provided from our central servers, removing the need for you to maintain them.
