

VOICE OVER IP PHONE SYSTEM

# VOIP BENEFITS

FOR BUSINESSES AND USERS

## MULTI-FUNCTIONALITY

### NOT JUST CALLS

VoIP systems also incorporate many other functionalities, such as instant messaging, presence monitoring, file and screen sharing, teleconferencing and video conferencing.

## MOBILITY

### NOT RESTRICTED TO THE OFFICE

As long as you have internet access, you can use your office extension from and to anywhere. This has a massive effect on productivity and mobility, allowing your employees to always be in contact.

## COST-EFFECTIVE

### SAVING MONEY TO ANY BUSINESS

With VoIP, installation costs are minimal, and operating costs are lower. You no longer need separate networks for data and phone. It also allows your employees to use their own smartphone as an office extension, which saves on your company's phone bill.

## EASY MAINTENANCE

### WEB BASED INTERFACE

If any problem occurs using a VoIP system it can be solved in a matter of minutes, via a web based maintenance interface. It also makes disaster recovery easier, as in an emergency, teams can join together from anywhere and any device to address concerns and keep the business running.

## SYSTEM INTEGRATION

### INTEGRATE YOUR COMMUNICATION TOOLS

VoIP as a phone system will enable you to record voice calls as well as saving them in customer records. You can make sure important information is not missed and your messages are not lost! Last but not least, you can route those voicemails to your email.

## FLEXIBILITY

### ADD USERS ON THE GO

Scale your system without the high installation costs and monthly rental of new lines. You can grow your phone system as much as you desire regardless of your company size.
